

PACS Viewer Backend API - Documentation

Project Overview

This API enables the upload, storage, and retrieval of medical image files as part of a PACS-like system. Files are stored locally, and metadata is recorded in an SQLite database. The API supports listing all uploaded files and retrieving them by ID.

API Endpoints

1. POST /upload/ - Upload a medical file

Form Data: file (UploadFile)

2. GET /files/ - List all uploaded files

3. GET /files/{file_id} - Retrieve a specific file by ID

Database Schema

Table: files

- id (INTEGER, PRIMARY KEY)
- filename (TEXT)
- content_type (TEXT)
- upload_time (TEXT)

Technologies Used

- Python 3.10+
- FastAPI

PACS Viewer Backend API - Documentation

- SQLite
- FPDF for documentation
